PROFESSIONAL SUMMARY

AWS & DevOps professional with hands-on experience in **AWS** infrastructure, including **EC2, VPC, Auto Scaling, Load Balancing, and RDS**, along with **Terraform-based automation and CI/CD workflows**. Skilled in deploying scalable cloud infrastructure and automating provisioning through **Infrastructure as Code** via hands-on projects. Strong understanding of DevOps practices, cloud automation, containerization, and monitoring, with a focus on building scalable, reliable, and efficient cloud solutions.

TECHNICAL SKILLS

Cloud Platforms(AWS): EC2, S3, IAM, VPC, RDS, EBS, ALB, ASG, CloudWatch, Route 53, SNS
IaC & Automation: Terraform, Ansible, CloudFormation, Launch Templates, User Data scripting
CICD & Containers: Jenkins, Docker, Kubernetes
Version Control: Git, GitHub, GitLab, Bitbucket
Web Server: Nginx, Apache, Tomcat
Monitoring Tools: CloudWatch, Prometheus, Grafana
Networking & OS: TCP/IP, DNS, HTTP/HTTPS, SSH, Load Balancing, Linux (Ubuntu, Amazon Linux)
Databases: MySQL, PostgreSQL, DynamoDB, MariaDB

PROJECTS

AWS-Intelligent-Scalable-Infrastructure-with-Monitoring

- Designed and deployed a scalable web application infrastructure on **AWS** using **VPC,** public/private subnets, and secure networking components.
- Configured **Nginx** as a reverse proxy, **Apache Tomcat** as the application server, and **Amazon RDS MySQL** for database management.
- Implemented Application Load Balancer (**ALB**) and Auto Scaling Group (**ASG**) to ensure high availability and traffic distribution.
- Created **AMIs** and Launch Templates for automated instance provisioning and deployment.
- Configured Amazon **CloudWatch** to monitor **EC2** CPU utilization, disk Usage, server health, and application logs for better performance monitoring.

CloudShift-Enterprise Database Migration to AWS RDS

- Deployed and configured a self-managed **MariaDB** database on an **AWS EC2** instance.
- Provisioned **Amazon RDS** and established secure connectivity using Security Groups.
- Migrated database data from **EC2** to **Amazon RDS** using backup and restore techniques, reducing manual deployment overhead.
- **Tools Used: AWS (EC2, Amazon RDS, Security Groups), MariaDB, Linux, SQL.**

DockStack-Containerized-Web-Application-on-AWS

- Deployed a multi-container web application on **AWS EC2** using **Docker and Docker Compose** with separate **Proxy, Frontend, Backend, and MySQL** services.
- Configured **Nginx** as a reverse proxy to route requests between the frontend and backend services.
- Implemented **Docker bridge networking** using separate web and database networks, enabling secure service-to service communication.
- Configured MySQL health checks, service dependencies, environment variables, and persistent Docker volumes for reliable database operations and data persistence.
  Tools Used: AWS EC2, Docker, Docker Compose, Nginx, Node.js 22, Python 3.12, MySQL 8.4, Amazon Linux

EDUCATION

Y.M.I.M (Bharati Vidyapeeth Deemed to be University, Pune) (MCA) | Jul 2024 - Jul 2026
Pune University | CGPA: 9.65

K.R.P College, Islampur (BCA) | Jul 2021 - Jul 2024
Shivaji University | Percentage: 79.44%

CERTIFICATIONS

- **Completed the Google Cloud Generative AI virtual internship** – SMARTBRIDGE
- **Master in Cloud Architecture** – Fortune Cloud Technology, Pune
- **AWS Cloud Practitioner Essentials** – AWS Training & Certification
